BOILER CONTINGENCY PLANNING

Your guide to planning ahead and ensuring your boiler plant and heating infrastructure are fully supported with expert boiler services, maintenance and contingency solutions.

Cross Rental Services

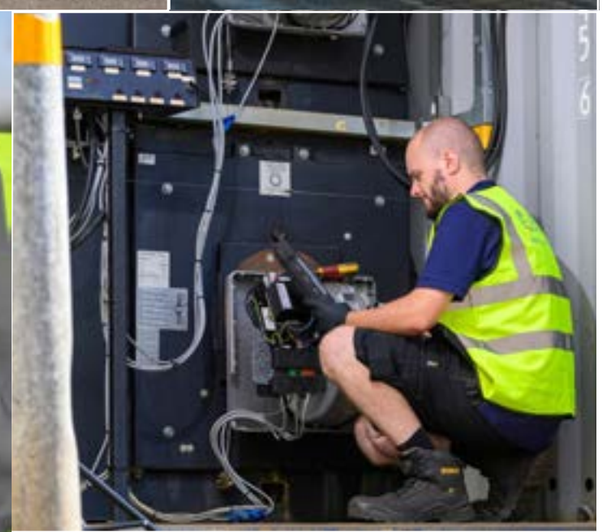

Ready when you are.

Why do your projects need a contingency plan?

The facilities and infrastructure the nation depend on don't stop being critical when boiler systems unexpectedly fail.

A robust boiler contingency plan is essential to maintain heating and hot water, protect critical operations and minimise disruption when the worst happens. Our comprehensive approach to boiler contingency planning combines specialist technical expertise, proactive maintenance, emergency response and ongoing service support to help identify vulnerabilities, reduce operational risks and ensure boiler plant remains reliable and resilient.

Through careful planning and expert intervention, we help clients prepare for unexpected failures, restore essential services quickly and maintain continuity when it matters most.

We are Cross Rental Services. **Ready** when you are.

What's included in a Boiler contingency plan?

Our boiler contingency planning service is a comprehensive solution designed to give you complete peace of mind, by planning exactly what you'll need when critical boiler plant, heating or hot water systems unexpectedly fail.

1. Full site survey

Our team conducts a thorough site survey to identify your site's specific requirements, assess existing boiler infrastructure and determine the optimal positioning for temporary boiler equipment.

During this evaluation, we assess potential points of failure, review system capacity and connectivity, and produce a bespoke risk assessment and method statement, making future deployment faster and more straightforward.

We also identify all enabling works required for temporary boiler installation, including pipework, power supplies, flue arrangements and connections, helping ensure future hire equipment can be installed, commissioned and brought online quickly, safely and with minimal disruption.

What's included in a Boiler contingency plan?

We deliver a comprehensive boiler disaster recovery plan for your site, encompassing a bespoke risk assessment and method statement, identification of all enabling works required and a clear activation plan.

2. Documented Disaster Recovery Plan

We provide a detailed quotation covering the full cost of supplying, delivering, installing and commissioning the exact temporary boiler equipment needed, ensuring that when it's called upon, it can be mobilised and installed without delay.

Depending on the site's requirements, we may also recommend keeping boiler equipment on-site for immediate redundancy, or ring-fencing suitable equipment at one of our depots and holding it ready for rapid deployment.

Depending on the site's requirements, we may also recommend keeping boiler equipment on-site for immediate redundancy, or ring-fencing suitable equipment at one of our depots and holding it ready for rapid deployment.

The contingency planning process.

STEPS

1. BOOK A CONTINGENCY PLAN

Book a contingency plan for the site with our team.

2. SITE SURVEY

Our technical team will then carry out a full site survey to assess requirements and identify any potential points of failure.

3. DOCUMENTATION

The site's tailored contingency plan document is prepared and supplied in both hard and digital formats, outlining what is required in the event of a failure.

4. ACTIVATION

In the event the contingency plan needs to be activated, you will contact our team quoting the site's unique contingency reference number. The equipment will be dispatched promptly, along with a qualified engineer to install and commission the equipment, ensuring minimal downtime and swift restoration of service.

OPTIONAL

ENABLING WORKS

We can complete all necessary gas, water and power connections to ensure your site is ready for deployment of temporary equipment, if required.

OPTIONAL

EQUIPMENT DELIVERED ON-SITE

If you have chosen to have the equipment delivered and installed on-site in advance, it will be fully commissioned and ready to operate at a moment's notice. Should you need to activate it, simply contact our team quoting the site's contingency reference number and we will promptly dispatch an engineer to carry out all necessary commissioning procedures.

OPTIONAL

HIRE EXTENSIONS

We can work with you to arrange an extension to the hire period to keep things operating.

Ready when you are.

Our boiler contingency planning solutions provide resilience and compliance across critical infrastructure sites, helping maintain essential heating and hot water supplies and enabling facilities to remain fully operational in the face of disruption. Through specialist technical expertise, proactive planning and responsive service support, we help minimise downtime and ensure the right boiler solutions are ready when they are needed most.
